2. The question paper CODE is printed on the left hand top corner of this sheet and on the back cover page of this bookiet.
3. Blank spaces and blank pages are provided in the question paper for your rough work. No additional sheets will be provided for rough work.
4. Blank papers, clipboards, log tables, slide rules, calculators, caperas, cellular phones, pagers and electronic gadget of any kind are NOT allowed inside the examination hall.
5. Write your Name and Roll number in the space provided on the pack cover of this booklet.
6. Answors to the questions and personal details are lo be filted on an Optical Response Sheet, which is provided separately. The ORS is a doublet of two sheots - ypper and lower, having identical layout. The upper sheet is a machine-gradable Objective Response Sheet (ORS) which will be collected by the invigilator at the end of the examination. The upper sheet is designed in such a way that darkening the bubble with a ball point pen will leave an identicalimpression at the corresponding place on the lower sheet. You will be allowed to take away the ower sheet at the end of the examination. (see Figure-1 on the back cover page for the correct way of darkening the bubbles for valid answers).
7. Use a black ball point pen only to darken tha bubbles on the upper original sheet. Apply sufficient pressure so that the impression is created on the lower sheet. See Figure-1 on the back cover page for appropriate way of darkening the bubbles tor valid answers.
8. DO NOT TAMPER WITH / MUTILATE THE ORS OR THIS BOOKLET.

## I NSTRUCTI ONS

## A. General

1. This booklet is your Question Paper. Do not break the seal of this booklet before being instructed to do so by the invigilators.
2. The question paper CODE is printed on the left hand top corner of this sheet and on the back cover page of this booklet
3. Blank spaces and blank pages are provided in the question paper for your rough work. No additional sheets will be provided for rough work.
4. Blank papers, clipboards, log tables, slide rules, calculators, cameras, cellular phones, pagers and electronic gadget of any kind are NOT allowed inside the examination hall.
5. Write your name and Roll number in the space provided on the back cover of this booklet.
6. Answers to the questions and personal details are to be filled on an Optical Response Sheet, which is provided separately. The ORS is a doublet of two sheets upper and lower having identical layout. The upper sheet is a machine-gradable. Objective Response Sheet (ORS) which will be collected by the invigilator at the end of the examination. The upper sheet is designed in such a way that darkening the bubble with a ball point pen will leave an identical impresssion at the corresponding place on the lower sheet. You will be allowed to take away the lower sheet at the end of the examination (see figure-1 on the back cover page for the correct way of darkening the bubbles for valid answers)
7. Use a black ball point pen only to darken the bubbles on the upper original sheet. Apply sufficient pressure so that the impression is crated on the lower sheet. See Figure-1 on the back cover page for appropriate way of darkening the bubbles for valid answers.
8. DO NOT TAMPER WITH/MUTULATE THE ORS OR THIS BOOKLE
9. On breaking the seal of the booklet check that it contains 28 pages and all the 60 questions and corresponding answer choice are legible. Read carefully the instruction printed at the beinning of each section.

## B. Filling the right part of the ORS

10. The ORS also has a CODE printed on its left and right parts.
11. Verify that the CODE printed on the ORS (on both the left and right parts) is the same as that on this booklet and put your signature in the Box designated as R4.
12. IF THE CODES DO NOT MATCH ASK FOR A CHANGE OF THE BOOKLET/ORS AS APPLICABLE.
13. Write your Name, Roll No. and the name of centre and sign with pen in the boxes provided on the upper sheet of ORS. Do not write any of thi anywhere else. Darken the appropriate bubble UNDER each digi of your Roll No. in such way that the impression is created on the bottom sheet. (see example in figure 2 on the back cover)

## PHYSICS

SECTION - 1 : (One or More Than One Options Correct Type)
This section contains 10 multiple choice questions. Each question has four choices (A),(B), (C) and (D) out of which ONE or MORE THAN ONE are correct.

1. In the figure, a ladder of mass $m$ is shown leaning against a wall. It is in static equilibrium making an angle $\theta$ with the horizontal floor. The coefficient of friction between the wall and the ladder is $\mu_{1}$ and that between the floor and the ladder is $\mu_{2}$. The normal reaction of the wall on the ladder is $\mathrm{N}_{1}$ and that of the floor is $\mathrm{N}_{2}$. If the ladder is about to slip, then

(A) $\mu_{1}=0 \quad \mu_{2} \neq 0$ and $\mathrm{N}_{2} \tan \theta=\frac{\mathrm{mg}}{2}$
(B) $\mu_{1} \neq 0 \quad \mu_{2}=0$ and $N_{1} \tan \theta=\frac{\mathrm{mg}}{2}$
(C) $\mu_{1} \neq 0 \quad \mu_{2} \neq 0$ and $N_{2}=\frac{\mathrm{mg}}{1+\mu_{1} \mu_{2}}$
(D) $\mu_{1}=0, \mu_{2} \neq 0$ and $\mathrm{N}_{1} \tan \theta=\frac{\mathrm{mg}}{2}$

Key: C, D
Sol: $\mathrm{f}_{1}=\mu_{1} \mathrm{~N}_{1} ; \mathrm{f}_{2}=\mu_{2} \mathrm{~N}_{2}$
$\mathrm{N}_{1}=\mathrm{f}_{2} ; \quad \mathrm{mg}=\mathrm{N}_{2}+\mathrm{f}_{1}$
$\mathrm{mg}=\mathrm{N}_{2}+\mu_{1} \mathrm{~N}_{1}$
$m g \cos \theta \frac{l}{2}=N_{1} \sin \theta l+f_{1} \cos \theta l$
$\Rightarrow \frac{m g}{2}=N_{1} \tan \theta+\mu_{1} N_{1} \quad \Rightarrow N_{1}=\frac{m g}{2\left(\tan \theta+\mu_{1}\right)}$
$N_{2}=\frac{N_{1}}{\mu_{2}}=\frac{m g}{2 \mu_{2}\left(\tan \theta+\mu_{1}\right)}$
$\therefore \quad \tan \theta=\frac{1-\mu_{1} \mu_{2}}{2 \mu_{2}}$
2. Two ideal batteries of emf $V_{1}$ and $V_{2}$ and three resistances $R_{1}, R_{2}$ and $R_{3}$ are connected as shown in the figure. The current in resistance $R_{2}$ would be zero if

(A) $\mathrm{V}_{1}=\mathrm{V}_{2}$ and $\mathrm{R}_{1}=\mathrm{R}_{2}=\mathrm{R}_{3}$
(B) $\mathrm{V}_{1}=\mathrm{V}_{2}$ and $\mathrm{R}_{1}=2 \mathrm{R}_{2}=\mathrm{R}_{3}$
(C) $\mathrm{V}_{1}=2 \mathrm{~V}_{2}$ and $2 \mathrm{R}_{1}=2 \mathrm{R}_{2}=\mathrm{R}_{3}$
(D) $2 \mathrm{~V}_{1}=\mathrm{V}_{2}$ and $2 \mathrm{R}_{1}=\mathrm{R}_{2}=\mathrm{R}_{3}$

Key: A, B, D

Sol : $i_{2}=\frac{\frac{V_{1}}{R_{1}}-\frac{V_{2}}{R_{3}}}{R_{2}+\frac{R_{1} R_{3}}{R_{1}+R_{3}}}=0$
$\Rightarrow \frac{V_{1}}{R_{1}}=\frac{V_{2}}{R_{3}}$
3. A transparent thin film of uniform thickness and refractive index $n_{1}=1.4$ is coated on the convex spherical surface of radius $R$ at one end of a long solid glass cylinder of refractive index $n_{2}=1.5$, as shown in the figure. Rays of light parallel to the axis of the cylinder trayersing through the film from air to glass get focused at distance $f_{1}$ from the film, while rays of light traversing from glass to air get focused at distance $f_{2}$ from the film. Then

(A) $\left|f_{1}\right|=3 R$
(B) $\left|f_{1}\right|=2.8 R$
(C) $\left|f_{2}\right|=2 R$
(D) $\left|\mathrm{f}_{2}\right|=1.4 \mathrm{R}$

Key: A, C
Sol : $P=\frac{1.4-1}{R}+\frac{1.5-1.4}{R}=\frac{0.4+0.1}{R}=\frac{1}{2 R}$

$$
\begin{aligned}
& f_{\text {air }}=\frac{1}{\frac{1}{2 R}}=2 R=\left|f_{2}\right| \\
& \left|\mathrm{f}_{1}\right|=1.5 \times 2 \mathrm{R}=3 \mathrm{R}
\end{aligned}
$$

This heater is replaced by a new heater having two wires of the same material, each of length $L$ and diameter 2d. The way these wires are connected is given in the options. How much time in minutes will it take to raise the temperature of the same amount of water by 40 K ?
(A) 4 if wires are in parallel
(B) 2 if wires are in series

$$
m c(40)=\frac{E^{2}}{R} \times 4
$$

$$
\text { Series } m c(40)=\frac{E^{2}}{(R / 2)} \times x
$$

$$
\Rightarrow 4=2 x \Rightarrow x=2 \min
$$

Parallel $m c(40)=\frac{E^{2}}{R / 8} \times x \Rightarrow 4=8 x \Rightarrow x=0.5 \mathrm{~min}$
5. A parallel plate capacitor has a dielectric slab of dielectric constant $K$ between its plates that covers $1 / 3$ of the area of its plates, as shown in the figure. The total capacitance of the capacitor is $C$ while that of the portion with dielectric in between is $C_{1}$. When the capacitor is charged, the plate area covered by the dielectric gets charge $Q_{1}$ and the rest of the area gets charge $Q_{2}$. (C) $\frac{\mathrm{Q}_{1}}{\mathrm{Q}_{2}}=\frac{3}{\mathrm{~K}}$
(D) $\frac{\mathrm{C}}{\mathrm{C}_{1}}=\frac{2+\mathrm{K}}{\mathrm{K}}$

Key: A, D
Sol: $C=\frac{\in_{0}}{d}\left(\frac{A}{3} K+\frac{2 A}{3}\right)$

$$
\begin{aligned}

\end{aligned}
$$

$$
\frac{C}{C_{1}}=\frac{\frac{\in_{0}}{d} \frac{A}{3}(k+2)}{k \in_{0} A}=\frac{k+2}{k d}
$$

$$
\frac{\mathrm{E}_{1}}{\mathrm{E}_{2}}=\frac{\sigma_{1}}{\sigma_{2}}=\frac{\mathrm{Q}_{1} 2 \mathrm{~A} / 3}{\mathrm{~A} / 3 \mathrm{Q}_{2} \mathrm{k}}=\frac{2 \mathrm{Q}_{1}}{\mathrm{Q}_{2} \mathrm{k}}=\frac{2}{\mathrm{k}}\left[\frac{\mathrm{k}}{2}\right]=1
$$

(C) immediately after A is connected to D , the current in R is 10 A
(D) $\mathrm{Q}=2 \times 10^{-3} \mathrm{C}$

Key: C, D
Sol: $\frac{\mathrm{dq}}{\mathrm{dt}}=\mathrm{I}_{0} \cos \omega \mathrm{t}$

$$
\int \mathrm{dq}=\int \mathrm{I}_{0} \cos \omega \mathrm{tdt}
$$

$$

7. A light source, which emits two wavelengths $\lambda_{1}=400 \mathrm{~nm}$ and $\lambda_{2}=600 \mathrm{~nm}$, is used in a Young's double slit experiment. If recorded fringe widths for $\lambda_{1}$ and $\lambda_{2}$ are $\beta_{1}$ and $\beta_{1}$ and the number of fringes for them within a distance $y$ on one side of the central maximum are $m_{1}$ and $m_{2}$, respectively, then

Two massless spring toy-guns, each carrying a steel ball of mass 0.05 kg are attached to the platform at a distance 0.25 m from the centre on its either sides along its diameter (see figure). Each gun simulataneously fires the balls horizontally and perpendicular to the diameter in opposite directions. After leaving the platform, the balls have horizontal speed of $9 \mathrm{~ms}^{-1}$ with respect to the ground. The rotational speed of the platform in rad $\mathrm{s}^{-1}$ after the balls leave the platform is
